

## PROJECT MANAGEMENT ESSENTIALS

October 13th - 15th, 2009

### Overview

The foundation of what you need to know to manage projects in today's business environment is presented in this three-day course. PM Essentials provides a broad overview of the concepts and practices used in managing projects effectively in today's business environment.

It covers the basic concepts of four essential project management processes: defining requirements, scheduling, risk management, and change control.

### Who should take this course?

- Ø Individuals who work in projectized organizations (for example those in the energy, manufacturing or IT sectors) who manage, support or provide resources for projects
- Ø Individuals focused on project management as a career path
- Ø Individuals interested in beginning careers in project management
